What is Unicis?

Unicis is a deep tech company that uses artificial intelligence to change the way legal, privacy, security, and risk teams work. We are committed to providing SMEs/SMBs with cutting-edge solutions. Unicis was founded during the pandemic and is currently self-funded. The Unicis Platform serves as a hub that simplifies the management of security, privacy, risk, and compliance functions.

We are now looking for funding opportunities and community support to further develop our open-source platform and make it more widely used. Our commitment to this purpose is demonstrated through our provision of complimentary access to our solutions:

- Unicis Platform
- Unicis Apps

Vision

Our vision is to create a world where compliance is effortless, efficient, and transparent for every business. We strive to do this by providing a single, comprehensive application that addresses all compliance, privacy, risk, and security concerns.

vision

Mission

Our mission is to empower startups and SMBs by offering a comprehensive solution that streamlines compliance, security, risk, and privacy management through the integration of Unicis Platform, and Unicis Atlassian Apps. This eliminates the need for manual spreadsheet tracking and makes compliance processes more trustable.

mission

Goal

Our goal is to improve compliance, security, risk, and privacy by automating and simplifying workflows. We are striving to reduce the use of spreadsheets and provide an open-source solution for compliance management by the end of the fiscal year. This shows how committed we are to driving innovation and progress in the industry.

Problem

At Unicis, we know how hard it is to manage multiple security, privacy, risk, and compliance tools every day. This makes people upset and makes it hard to concentrate on important tasks. We are developing a solution that will help small- and medium-sized businesses (SMBs) manage these important functions.

Solution

We saw the need for free and open-source tools to help security, privacy, legal, risk, and compliance teams in their daily work while working in fintech and small businesses. We chose to use Atlassian Forge to make Jira and Confluence Cloud apps. With more than 42% of the market, Atlassian products are well-known and used in startups and the technology sector. We also offer Unicis Platform Software-as-a-Service, which uses the latest technology and other cloud services for people who don't use the Atlassian ecosystem. We are working with qualified professionals who can help startups with cybersecurity, data protection, risk assessment, and regulatory compliance.
