Introduction

Welcome to the Unicis Source Code Handbook. This guide provides an overview of how we manage our source code across different repositories, both private and public. It covers the structure, guidelines, and best practices for contributing to the Unicis Platform.

Repository Overview

Unicis manages two separate sets of repositories:

- **Private Repositories:** Hosted on GitLab, containing proprietary source code for Unicis Platform Business Edition, Unicis Apps, website, and this handbook.
- **Public Repository:** Hosted on GitHub, containing the open-source code for the Unicis Platform Community Edition.

Private Repositories on GitLab

Our private repositories are used for internal development and contain sensitive, proprietary code. These repositories are not open to the public.

Unicis Platform Business Edition

The Business Edition of the Unicis Platform includes enterprise features and custom integrations.
